

SERIES 167 – BUILD-IN COOKING HOB
MODEL:- S~HB16746Y

FITTING INSTRUCTIONS FOR GLASS LID

1. Rotate the two hinges into the open position. The hinge spring tension is quite strong, the use of a flat blade screw driver in the hinge 'glass slot' will assist with this operation.
2. Rotate one full turn anticlockwise the two glass retaining screws.
3. Check the plastic sleeve is located correctly in each hinge.
4. Insert the glass lid into the hinges, the small clear panels on the bottom edge of the glass will assist with alignment to the hinges.
Important - The printed face of the glass MUST be on the underside of the glass when the lid is shut.
5. Rotate clockwise both glass retaining screws and apply a torque of 15 lbf-in to lock the glass in position.
6. Carefully close the lid and verify both left and right gaps, between the glass and trim, are equal.

NOTE:- If the side gaps are unequal realigned the glass by repeating above sequence.
